

****Document****

****Business Requirements for Greeting Message Display System****

****Business Objectives:****

The objective is to display a greeting message with the name and ID of a person.

****Input Fields:****

- ****WS-NAME:**** An alphanumeric field with a length of 30 characters. The default value is "TutorialsPoint".
- ****WS-ID:**** A numeric field with a length of 5 digits. The default value is 12345.

****Output Fields:****

The output will consist of a greeting message containing the name and ID of the person.

****Business Rules:****

The system will:

- Display "Hello World" as the initial greeting.
- Display "My name is: " followed by the value in the WS-NAME field.
- Display "My ID is: " followed by the value in the WS-ID field.
- Stop the program execution after displaying the messages.

****Assumptions or Constraints:****

- The input values for WS-NAME and WS-ID are predefined in the program and do not require dynamic input.
- The system does not perform input validations or complex processing; it only displays the

predefined values.
